DISTINGUISHED ARCHITECT

ENTERPRISE TECHNOLOGY STRATEGY, ARCHITECTURE & TRANSFORMATION

PRÉCIS

As a Distinguished Architect, I have learned that for a senior IC, technology is only part of the job. The hard enterprise problems lie at the intersection of strategy, technology, business model, process, organizational structure, incentives, and communication. That is where I find the most leverage, and where I do my best work.

I came up through the ranks as a software engineer, and I pair that full-stack depth with strategic thinking, sensemaking, 360-degree communication, process modeling, and stakeholder alignment — grounded in a practical understanding of how large organizations actually get things done.

This is how I move complex enterprise initiatives from “this is a mess, how do we even begin?” to “it is in production.”

EMPLOYMENT

CVS Health

09/2023 — Present

Distinguished Architect, Enterprise Architecture & Modernization

05/2026 — Present

- Built a technical screening framework that reduced unsuitable candidates advancing to interviews by 50%
- Defining an application modernization strategy and readiness assessment framework
- Designing a cross-domain business value modeling and strategy framework for business architecture

Distinguished Engineer, Infrastructure Solutions

09/2023 — 05/2026

- Designed a multi-domain regulatory compliance modernization strategy
- Led SOX compliance modernization for 1,700+ applications, migrating them to a unified platform
- Defined an integration identity model for the enterprise application landscape and 32 business process domains spanning security, compliance, operations, finance, and strategy
- Rebooted Enterprise Architecture platform practice to use Enterprise Knowledge Graph
- Led the definition of enterprise landscape and product model for 9,000+ enterprise applications
- Launched and operationalized product audit practice for Tier 1 and Tier 2 business-critical applications
- Launched Enterprise Knowledge Management capability using federation strategy
- Filed five patent applications spanning AI, knowledge graphs, and semantic systems

Inmar Intelligence Inc.

09/2021 — 06/2023

Senior Director

- Proposed, formed, and led the Advanced Technologies Group
- Formulated and implemented Blockchain Platform strategy for Web3 enterprise services
- Delivered two products on the blockchain platform from conception to production in a year, securing the first commercial account and multimillion-dollar revenue projection
- Developed platform services with TypeScript, MongoDB, SQL, Kubernetes, and PaaS capabilities
- Launched the Enterprise Architecture practice

Principal IoT Solution Architect

- Architected and developed EcoStruxure 2.0, increasing uptime from 99% to 99.99%
- Developed and socialized capability-centric IoT reference architecture for the Microsoft Azure-based IoT platform (EcoStruxure)
- Designed and developed EcoStruxure platform components and services (LPWAN integration, Ontology service, etc.) using C#, .NET, Azure Data Lake, and MongoDB
- Designed IoT training courses and taught them to teams around the globe
- Led multiple projects across IoT and IIoT domains, including Industry 4.0 and Green energy projects
- Initiated multiple internal projects across Enterprise Architecture and knowledge domains

Solution Architect

- Managed a best-in-class knowledge base on the MediaWiki platform, with 200,000+ articles
- Designed and led the implementation of high-availability architecture for the company MediaWiki cluster, achieving 50% latency reduction and uptime improvement from 98% to 99.995%
- Initiated and led through completion the migration of the LKM group’s systems to a DevOps platform (Puppet), achieving 75% reduction in operating cost
- Architected corporate document storage, enabling discoverability of 6 million documents
- Initiated and led the implementation of the group REST microservice platform

Chief Technical Officer

08/2007 – 09/2012

- Led development effort for a SaaS solution that scaled to 300,000+ users with 99.99% service uptime
- Oversaw platform integration with the clients’ IT infrastructure (ADDS, LDAP, SSO, etc.)
- Deployed the sales support infrastructure, integrating it with third-party analytics services
- Led customer support and success management for 200+ clients

Senior Software Engineer

05/2005 – 08/2007

- Developed the SaaS application in the LAMP stack
- Integrated with the clients’ IT infrastructure (ADDS, LDAP, SSO, etc.)
- Administered the server backend for the SaaS deployment

EDUCATION, LANGUAGES & CERTIFICATION

University of Massachusetts Amherst
Master of Science, Computer Science

Pace University
Bachelor of Science, Computer Science

Languages
English, Ukrainian, Russian — fluent · Spanish — intermediate

Certification
TOGAF 9 Certified

INTELLECTUAL PROPERTY & STANDARDS SUMMARY

INTELLECTUAL PROPERTY & STANDARDS

Addendum to the résumé of Victor Danilchenko

ISSUED PATENTS

“System for generating a non-fungible token including mutable and immutable attributes ...”	US12469042B1 · 11/2025
“Secure data orchestrator for IoT networks”	US12413592B2 · 09/2025
“Dynamic ontology data operation”	US12111861B2 · 10/2024
“Semantic meta federation broker for cloud environments”	US12014221B2 · 07/2024
“Establishing & maintaining secure device communication”	US11924232B2 · 03/2024
“Security Context Distribution Service”	US11888998B2 · 01/2024
“Distributed standards registry for cloud environments”	US11778063B2 · 10/2023
“IoT Licensing platform & architecture”	US11711428B2 · 07/2023

PENDING APPLICATIONS

“Relationship-based Access Control for IoT Networks”	US20230164189A1
“Persona-based multi-user AI chatroom”	US 19/647,523
“Systems and methods of a progressive cloud based architecture”	US20210092007A1
“Non-fungible token system generating tethered and reference non-fungible tokens ...”	US 18/206,994
“Non-fungible token system for digital wallet processing and related methods”	US 18/137,283
“Systems and methods for utilizing a Time-To-Truth (TTT) metric for knowledge ...”	US 19/076,214
“Systems and methods for using AI models to maintain and update provider...”	US 19/029,260 · US 19/028,993
“Systems and methods for semantic service deployment”	US 18/966,621
“Systems and methods for federated knowledge governance”	US 18/827,114
